Virkon Aquatic<sup>®</sup>

**THE SAFE, EFFECTIVE VIRUCIDE BACTERICIDE AND FUNGICIDE FOR RIVERS  
AND FISHERIES.**

There are currently major problems with killer diseases in river and pond fisheries in England.

'High Risk' areas include watersheds in Gloucestershire, Staffordshire, Hampshire and Somerset. Also of current concern are rivers in Essex and the South East. The main killers currently subject to official management controls are Carp Herpes Virus (KHV) and *Aphanomyces* fungus of crayfish. There are, however, many other serious pathogens and nowhere is exempt from the potential risk of major loss and official destruction order.

There are no treatments and the only way to limit risk is to practise full bio-security using the Bradan Bio-security Plan and the only fully attested aquatic disinfectant, "Virkon Aquatic<sup>®</sup>"

Details of the plan, options on dilution strengths, amount of powder required relative to the volume of your net or foot dip for still water and river fisheries can be obtained by contacting our enquiries desk at
